Impact Perk	0,8-1,2mm	3,5m	10
Impact SRF	0,8-1,2mm	3,5m	10
Impact 25-5-10+mg	1,2-1,8mm	4m	12
Scotts NK	0,7-1,4mm	4m	10

Spreader settings for recommended spread of 2 kg/100 sqm.

* Spread width at normal walking speed (approx. 5km/h)

How to calibrate the DU Spreader, using any product

1. Using smaller granules, adjust the scale to 9 or 10. With larger granules, open more.
2. Fill the container evenly with 5 kg of fertilizer
3. Spread the fertilizer 10 m straight forward
4. Measure the covered area (length x width)
5. Weigh the remaining product in the container

Formula: $100/\text{area} \times \text{discharged fertilizer (kg)} = \text{kg fertilizer}/100 \text{ square meters.}$
